                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Genes were identified by a combination of several methods: Gene prediction programs including Fgenesh (http://www.softberry.com/), genecan and Genscan+ (Chris Burge, http://CRR-081.mit.edu/GENSCAN.html), GeneMarkHMM (Mark Borodovsky, http://CRR-081.mit.edu/GENSCAN.html), GeneMark/), and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mpertea@tigr.org), searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/tdb/fgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database htts. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding trNNAs are predicted by trNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats are identified by repeatmasker (Arian Smit, http://spenome.washington.edu/RM/RepeatMasker.html).

Genes were predicted from the integrated results of the following: GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH (http://www.softberry.com/), Genemark.hmm (http://www.softberry.com/), Genemark.hmm (http://opal.biology.gatech.edu/GeneMark/), GlimmerM (http://opal.biology.gatech.edu/GeneMark/), SplicePredictor (http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor (http://bioinformatics.iastate.edu/cgi-bin/sp.cgi), BLASTN and BLASTN. The genomic sequence was searched against NCBI NonRedundant Protein database no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      20209
               (ftp://ncbi.nlm.nih.gov/blast/db) and the EST sequence database at RGP. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTS represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID. A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without such as same name, 'putative-' and '-like protein'. A gene without such as same name, 'putative-' and '-like protein'.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The orientation of the sequence is from SP6 to T7 of the PAC clone. This sequence of P0705E11 clone has an overlap with OSJNBb0069D16 clone(DDBJ: AP005882)at 5' end and an overlap with OSJNBa0038K02(DDBJ: AP005862) at 3' end.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   complement (7148..9310)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1. .140729 NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a "working draft" sequence.

* This sequence will be replaced

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              BLASTN with the corresponding DDBJ accession no.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'uppothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a 'probable 'hypothetical' protein and is included as a misscellaneous feature of the sequence.

The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This sequence of OJ1148_DOS clone has an overlap with OJ1743_B12_(DDBJ: AP004796) clone at 5' end and with P0017H11 (DDBJ: AP004796) also as 'end. The sequence was generated by combining Monsanto and RGP-Japan sequencing data. Detailed information on overlap and assembly quality together with annotation of this entry is available at 'protein and sequency and an entry the sequency of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Oryza sativa (japonica cultivar-group)

The invention provides a male tissue-preferred regulatory region (I) comprising nucleotide sequences essential for initiating transcription the MS45 gene. A method of mediating male fertility in a plant is provided that involves introducing an expression vector comprising a promoter operably linked to (I) into a plant where the exogenous gene impacts male fertility of the plant and (I) controls expression of the exogenous gene. A method of producing hybrid seeds is also provided. The present sequence represents a DNA fragment -152 to -181 bases upstream

The am of

o ff

A male tissue-preferred regulatory region comprising nucleotide sequences essential for initiating transcription of the MS45 gene useful for mediating fertility in a male plant.

                                                                                                                                 The invention provides a male tissue-preferred regulatory region (I) comprising nucleotide sequences essential for initiating transcription of the MS45 gene. A method of mediating male fertility in a plant is provided that involves introducing an expression vector comprising a promoter operably linked to (I) into a plant where the exogenous gene impacts male fertility of the plant and (I) controls expression of the exogenous gene. A method of producing hybrid seeds is also provided. The present sequence represents a Z. mays Ms45 promoter fragment
                                                                                                                                                                                                                            A male tissue-preferred regulatory region comprising nucleotide sequences essential for initiating transcription of the MS45 gene useful for mediating fertility in a male plant.

It may be used in the construction of a vector for a method of producing exogenous genes in a male tissue- preferred manner, which is useful in restoring or conferring fertility, such as in hybrid seed production. In conferring fertility, a monocot/dicot plant is transformed with the exogenous nucleotide sequence (a male sterility gene, preferably Ms45), which encodes a product selected from auxins, rolls and diptheria toxin. Hybrid seeds are produced by cross-pollinating maize male fertile

It may be used in the construction of a vector for a method of producing exogenous genes in a male tissue- preferred manner, which is useful in restoring or conferring fertility, such as in hybrid seed production. In conferring fertility, a monocot/dicot plant is transformed with the exogenous nucleotide sequence (a male sterility gene, preferably Ms45), which encodes a product selected from auxins, rolB and diptheria toxin. Hybrid seeds are produced by cross-pollinating maize male fertile and infertile plants
                                                                                                                                                                                                   A male tissue-preferred regulatory region essential for initiating transcription of mediating fertility in a male plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic - useful in
                          The invention provides a male tissue-preferred regulatory region (I) comprising nucleotide sequences essential for initiating transcription the MS45 gene. A method of mediating male fertility in a plant is provided that involves introducing an expression vector comprising a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides a male tissue-preferred regulatory region (I) comprising nucleotide sequences essential for initiating transcription of the MS45 gene. A method of mediating male fertility in a plant is provided that involves introducing an expression vector comprising a promoter operably linked to (I) into a plant where the exogenous gene impacts male fertility of the plant and (I) controls expression of the exogenous gene A method of producing hybrid seeds is also provided. The present sequence represents a DNA fragment -38 to -195 bases upstream of the plant and (I) and the present sequence represents a DNA fragment -38 to -195 bases upstream of the present sequence represents a DNA fragment -38 to -195 bases upstream of the plant and the present sequence represents a DNA fragment -38 to -195 bases upstream of the plant and the present sequence represents a DNA fragment -38 to -195 bases upstream of the plant and the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The present invention describes an isolated lung specific nucleic acid CC (LSNA) comprising a sequence that: (a) encodes any of the 93 amino acid CC sequences comprising 17 - 733 amino acids, given in ABB52873 to ABB52895; CC (b) comprises any of 115 sequences comprising 148 - 3193 base pairs (bp), CG given in AB075262 to ABQ75376; (c) selectively hybridises to (a) or (b), CC or (d) has 60 % sequence identity to (a) or (b). LSNA and lung specific CC protein (LSP) sequences have cytostatic activity and can be used in gene CC therapy and vaccines. LSNAs and LSPs are useful for diagnosing and CC monitoring the presence and metastases of lung cancer in a patient. An antibody that specifically binds to an LSP can be used for determining CC the presence of an LSP in a sample, as well as for treating a patient CC with lung cancer, particularly by inducing an immune response against the CL lung cancer cell expressing the LSNAs or LSPs. In particular, these LSNAs CC imaging and treating lung cancer (e.g. squamous cell carcinoma) and non-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to about the present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence
                                                                                                                                                                                                                                                                                      21-MAR-2001; 2001US-00815242.

                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                            or constitutive transcription of an operatively linked nucleic acid
segment. The invention also relates to a method for augmenting a plant
genome and a method of identifying a gene, where its expression is
altered in the seed, leaf, stem, paniale, pollen, root or is constitutive
in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower,
canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley,
sorghum, rice or wheat. The polynucleotides and the polypeptides they
encode are useful for manipulating crop plants to alter or improve
phenotypic characteristics, to produce large quantities of oil or
proteins, to incur resistance to insecticides, viruses or fungi, and to
incur stress tolerance (e.g. salt, cold or drought) to ensure the plants
have a high nutritional value with reduced apical dominance or dwarfism,
early flowering or altered metabolic pathways. This sequence represents a
plant nucleic acid of the invention. Note: The sequence data for this
patent did not form part of the printed specification but was obtained in
electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                   Query Match

M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invertion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Chang H,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           involved in plant resistance or response to pathogenic infection. Mi comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (MI) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
involved in plant resistance or response to pathogenic infection. MI comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction.                                                                                          The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                             Identifying at least pathogenic infection bacterial, fungal or

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT APPLICATION SOUTHARE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOUTWARE: Patentin Ver. 2.0
SEQ ID NO 29480
LENGTH: 549

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IDENTITY_NUC

                                                                                                                    Clemson University, 100 Jordan Hall, Clemson, SC 29634, USA On Jan 11, 2003 this sequence version replaced gi:24635891.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >=30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by more than one plasmid subclone; and the assembly was confirmed by restriction digest. There are transposons located at area 29427-22874 and at area 19945-33312. Region 70511-70536 is covered by a single subclone. Region 18678-18873 is a double stranded single subclone. Areas 69957-70761, 89836-90416, 98951-99009, 105316-105607, and 133052-133152 are covered by Monsanto only. The nucleotide sequence of this BAC clone was generated by combining
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1239
